Audit date: May 2026 | Crawled: knowurpolicy.vercel.app | Comparative vs prior audit

This is a **comparative re-audit** of KnowUrPolicy following migration from GoDaddy to Vercel. Every finding is based on a live crawl of **knowurpolicy.vercel.app**. Scores are shown before and after so progress is clearly visible.

Score Changes vs Previous Audit

Full Before vs After Comparison

Dimension	Before (GoDaddy)	Now (Vercel)	Change
Platform	GoDaddy Builder	Vercel (Next.js)	■ Migrated
Title tag	"Know Your Policy"	"KnowUrPolicy — Understand before you sign"	■ Fixed
Meta description	Missing / vague	AI-powered, 30 seconds, plain English	■ Fixed
og:locale	en_IN (India!)	Not set	■ Still missing
Canonical tag	Missing	Missing	■ Still missing
og:image	Broken Getty URL	Not set	■ Still missing
JSON-LD schema	None	None	■ Still missing
H1	Generic, repeated 4x	Keyword-rich, single	■ Fixed
Navigation	Logo only	How it works / Pricing / FAQ / Try free	■ Fixed
CTA	None	Upload CTA above fold	■ Fixed
Trust signals	None	3 pills (GDPR, deletion, no training)	■ Fixed
Feature cards	None	3 feature cards	■ Fixed
Sample output	None	Full sample analysis section	■ Fixed
Pricing	None	Free + Pro section	■ Fixed
FAQ section	None	4 Q&As	■ Fixed
Legal disclaimer	None	Persistent footer disclaimer	■ Fixed

Word count	~25 words	~450 words	■ Fixed
Upload page	Doesn't exist	/analyze with drag-drop zone	■ Built
Privacy notice	None	Inline on upload page	■ Fixed
Footer	Copyright only	Links + disclaimer	■ Fixed
Blog / content	None	None	■ Still missing
Sitemap.xml	None	Not confirmed	■ Check
Google indexed	0 pages	0 pages (new domain)	■ Submit now
Pro CTA	N/A	"Coming soon" — dead end	■ Conversion blocker
Footer links	None	# anchors (broken)	■ Placeholder

The UI/UX has transformed from a blank GoDaddy placeholder into a credible, structured SaaS landing page. The core architecture is solid — hero, features, sample output, pricing, FAQ, disclaimer. The remaining issues are mostly polish and conversion optimisation.

■ What's Working Well

- ✓ **Strong hero H1** 'Understand your policy before it's too late to act' — clear, emotional, keyword-relevant
- ✓ **Trust signals above fold** Three pills (deleted immediately, GDPR compliant, no training) directly below the CTA — exactly right
- ✓ **Sample analysis section** Real-shape output preview is the highest-converting landing page element. Smart to include it.
- ✓ **Legal disclaimer** Persistent non-dismissable disclaimer in footer. Correct positioning and wording.
- ✓ **Pricing structure** Free vs Pro two-column layout with feature lists. Clean and clear.
- ✓ **FAQ section** 4 relevant Q&As; covering the top objections (legal advice, storage, accuracy, document types)
- ✓ **Upload page privacy** Strong inline privacy notice on /analyze — exactly what was specified in the PRD
- ✓ **Navigation** How it works / Pricing / FAQ / Try free — all the right links in the right order
- ✓ **Clean typography** Good information hierarchy. Headlines are readable and distinct from body copy.
- ✓ **Word count** ~450 words vs 25 before — enough for Google to understand the page topic

■■ Issues to Fix

- | | |
|--|--|
| CRITICAL | Pro plan CTA says 'Coming soon' — kills conversion
The Pro plan button shows 'Coming soon' instead of linking to Stripe checkout. Any visitor who reaches the pricing section and wants to upgrade hits a dead end. This is the most damaging conversion issue on the page right now. |
| Fix: Connect Stripe Checkout immediately. Even a pre-launch waitlist email capture is better than 'Coming soon'. Every day this is broken is lost revenue. | |
| CRITICAL | Footer links all point to '#' — Privacy, Terms, Contact are broken
Footer has Privacy, Terms, and Contact links but all use '#' as the href. These are legally required pages (GDPR mandates a Privacy Policy, Terms protects you legally). Clicking them does nothing, which damages trust. |
| Fix: Build /privacy, /terms, and /contact pages. The Privacy Policy and Terms of Service are non-negotiable for GDPR compliance and for Stripe to allow your account. | |

HIGH	No visual brand differentiation — could be any SaaS The page has good structure but no distinctive visual identity. No logo mark, no colour personality, no illustration or product screenshot. The KnowUrPolicy design system (Navy + Amber, Playfair Display display font, document icon mark) from the design doc has not been applied. Fix: Apply the brand: add the document logo mark to the nav, use Playfair Display for headings, introduce amber as the CTA accent colour, and add the risk flag colour system to the sample output cards.
HIGH	Sample output section lacks visual impact The sample analysis renders as text only — clause titles and descriptions without the visual risk flag stripe system, colour coding, or card structure shown in the design document. This undersells the product's most compelling differentiator. Fix: Implement the clause card design: left-stripe colour (green/yellow/red), flag badge, bold title, plain English description. The visual system makes the risk flagging feel like a real product.
HIGH	No product screenshot or app UI preview The landing page describes what users get but never shows the actual analysis output screen. A screenshot or mockup of the full analysis page (with the accordion sections, complexity score, Q&A; panel) would dramatically increase conversion by showing the product is real. Fix: Add a device mockup or full-width screenshot of the /analyze results page below the hero. Even a static mockup built from the design system is more convincing than no visual.
MEDIUM	Eyebrow text 'AI-powered document clarity' is generic The hero eyebrow label above the H1 reads 'AI-powered document clarity'. This is generic SaaS language. The eyebrow should be specific and create urgency or curiosity. Fix: Try: 'Most people sign without reading. Here's what they miss.' or 'Used by 500+ people who sign contracts every month' (once you have social proof).
MEDIUM	No social proof or user count anywhere There are no testimonials, no user count, no trust logos, no 'as featured in' signals. For a product asking users to upload sensitive legal documents, social proof is a significant conversion driver. Fix: Add a simple stat bar after the hero once you have data: '2,400 documents analysed' or 3 one-line testimonials. For pre-launch, even 'Trusted by 50 beta users' counts.
MEDIUM	/analyze page has no back navigation The upload page (/analyze) has no nav bar, no 'back to home' link, no logo click. If a user lands here directly (from a social share or email), they are stranded with no way to learn about the product or navigate to pricing. Fix: Add the full nav bar to /analyze (same as homepage). At minimum add a logo link back to /.

MEDIUM**Mobile experience not verified but layout needs check**

The /analyze drag-and-drop upload zone may not work well on mobile where file upload UX differs significantly. iOS Safari does not support drag-and-drop — users need a 'tap to browse' fallback that is clearly visible.

Fix: Test /analyze on iOS Safari and Android Chrome. Ensure the upload button is at least 44px touch target. Add 'Tap to select your PDF' as mobile-specific copy.

Significant on-page SEO progress has been made — the title, meta description, H1, and content are now correct. However, the entire technical SEO layer (schema, canonical, og:locale, sitemap) is still missing. These are quick wins that should be added before any Google submission.

■ SEO Wins

- ✓ **Title tag fixed** 'KnowUrPolicy — Understand before you sign' — brand name + tagline, 45 chars, clean
- ✓ **Meta description present** 'AI-powered policy and contract analysis. Plain-English breakdown...in 30 seconds.' — keyword-rich and specific
- ✓ **H1 is strong** 'Understand your policy before it's too late to act.' — emotional + keyword relevant
- ✓ **Single H1** Only one H1 on the page (was 4 repeated before). Correct.
- ✓ **Content depth** ~450 words with feature descriptions, FAQ answers, pricing copy — enough for indexing
- ✓ **Page structure** Logical heading hierarchy: H1 → H2 sections (What you get back, Free to try, Questions answered)
- ✓ **Vercel platform** Clean Next.js on Vercel = fast CDN, automatic HTTPS, much better Core Web Vitals baseline than GoDaddy
- ✓ **Multiple pages** / and /analyze are both indexable — two URLs vs one before

■ SEO Issues Still Outstanding

- | | |
|-----------------|---|
| CRITICAL | No JSON-LD structured data — still zero schema markup
Despite the full rebuild, there is no JSON-LD schema on either page. This means: no rich snippets in Google results, no answer boxes from FAQPage schema, no SoftwareApplication rating display. Competitors who implement this get outsized SERP real estate.

Fix: Add to homepage: SoftwareApplication schema + FAQPage schema (the 4 FAQ questions are perfect candidates). Add HowTo schema to first blog article. Use JSON-LD in the . |
| CRITICAL | og:locale not set — Google geo-targeting is undefined
The og:locale meta tag is now missing entirely (previously it was wrong at en_IN). Without it, Google makes a best-guess at your target market. For a US/EU product this should be explicitly declared.

Fix: Add to the homepage head. Add hreflang='en-us' and hreflang='en-gb' link tags for US and UK/EU targeting. |

CRITICAL	No canonical tag on any page Neither the homepage nor /analyze has a canonical link tag. Without this, if the same content is accessible at multiple URLs (with/without trailing slash, HTTP vs HTTPS, www vs non-www), Google may split link equity across duplicates.
Fix: Add a canonical tag to every page. In Next.js this is one line in the metadata export: canonical: 'https://knowurpolicy.vercel.app' (and update to the custom domain when live).	
CRITICAL	og:image missing — social shares will render blank There is no og:image meta tag. Every share of the URL on LinkedIn, Twitter, or WhatsApp will show a blank grey box instead of a branded card. This is a major missed acquisition opportunity — every share is an ad impression you are giving away for free.
Fix: Create a 1200x630px branded image: navy background, logo, tagline, sample clause card. Host at /og-image.png and add to the head.	
CRITICAL	No sitemap.xml — Google has no discovery map There is no sitemap.xml at knowurpolicy.vercel.app/sitemap.xml. Without a sitemap, Google must discover pages by crawling links. For a new site with zero backlinks, pages beyond the homepage may never get indexed.
Fix: Install next-sitemap package (npm install next-sitemap). Add a sitemap config. This auto-generates /sitemap.xml on every build. Submit to Google Search Console immediately.	
CRITICAL	No robots.txt confirmed Fetching /robots.txt returned a permissions error — it may not exist. Without robots.txt, crawlers have no guidance. Vercel may serve a default but it should be explicitly configured to allow all content pages and block /api routes.
Fix: Add robots.txt to the /public folder: Allow: / with Sitemap pointing to sitemap.xml URL.	
HIGH	/analyze page has same title and meta description as homepage Both / and /analyze share the exact same title tag and meta description: 'KnowUrPolicy — Understand before you sign'. Duplicate titles confuse Google about which page to rank for which query.
Fix: Set /analyze title to: 'Upload Your Document — KnowUrPolicy AI Policy Analyser'. Set /analyze description to: 'Drag and drop your insurance policy or contract. Get a plain-English analysis in 30 seconds. Free, private, no account needed.'	
HIGH	No blog or content pages — zero long-tail keyword surface The site still has no /blog. Content SEO is the primary organic acquisition channel for a new SaaS. Without articles, the only rankable pages are the homepage and /analyze.
Fix: Publish 5 articles (full list in previous audit). Priority: 'AI insurance policy analyser best tools 2026' and 'Home insurance exclusions explained'. One article per week from launch.	

MEDIUM**FAQ schema missing — answer box opportunity wasted**

The FAQ section has 4 great questions that are eligible for Google Answer Boxes (position zero). But without FAQPage JSON-LD schema applied to them, Google cannot extract them into search results.

Fix: Wrap each FAQ Q&A; in FAQPage JSON-LD. This can appear above all organic results for queries like 'is KnowUrPolicy legal advice' and 'does it store my documents'.

The Vercel domain is new and not yet submitted to Google Search Console. The score moves from 0 to 5 only because the platform (Vercel/Next.js) is now technically capable of ranking — fast, clean HTML, correct title and meta. Actual ranking requires indexing, which requires a Search Console submission today.

Pages indexed 0 Not submitted	Ranking keywords 0 None yet	Domain authority ~1 New domain	Backlinks 0 None	Platform Vercel SEO-ready ✓
--	--	---	-------------------------------	--

CRITICAL

Site not submitted to Google Search Console

The Vercel deployment has not been verified and submitted to Google Search Console. Without this, Google has no way to discover the new URL, no sitemap to follow, and no indexing signals. This is the single most urgent action.

Fix: Go to search.google.com/search-console → Add property → Enter knowurpolicy.vercel.app → Verify via HTML tag method (add to Next.js metadata) → Submit sitemap → Request indexing on /.

CRITICAL

Custom domain not connected — SEO equity will be split

The site is live at knowurpolicy.vercel.app but the actual domain is knowurpolicy.com. Any Google authority built on the [.vercel.app](https://knowurpolicy.vercel.app) subdomain will NOT automatically transfer when you connect the custom domain. All backlinks, indexing, and ranking will need to restart unless you connect the custom domain NOW before any indexing happens.

Fix: Connect knowurpolicy.com to the Vercel project immediately (Vercel dashboard → Domains → Add). This takes 5 minutes. Do it before submitting to Google Search Console so you submit the correct canonical domain from day one.

CRITICAL

Bing, DuckDuckGo, and other search engines not submitted

Google is not the only search engine worth ranking on. Bing powers DuckDuckGo and is significant in the US market (about 6-8% market share). Bing Webmaster Tools is free and takes 10 minutes to set up.

Fix: Submit to Bing Webmaster Tools (bing.com/webmasters). Import your Google Search Console sitemap directly — Bing has a one-click import from GSC.

HIGH

Zero backlinks — no external discovery path for Google

Google discovers new pages primarily through backlinks from already-indexed sites. With zero referring domains, even after submitting to Search Console, Google may be slow to crawl and index new pages beyond the homepage.

Fix: Submit to free directories this week: Product Hunt, BetaList, Indie Hackers, G2, Capterra, Crunchbase, LinkedIn company page. Each is a DA 50-90 backlink and a discovery signal to Google.

HIGH**Vercel.app subdomain — not the final SEO home**

Search engines will index knowurpolicy.vercel.app, but your real domain is knowurpolicy.com. The sooner you move entirely to the custom domain (with a proper 301 redirect from .vercel.app), the sooner you start building authority on the domain you actually own.

Fix: In Vercel: Settings → Domains → Add knowurpolicy.com. Vercel auto-handles the SSL and redirect from vercel.app to your custom domain. Then submit knowurpolicy.com to Search Console.

Keyword Opportunity — Still Wide Open

Keyword	Difficulty	Timeline to Rank	Status
AI insurance policy analyser	Very Low	60 days post-index	Not ranked — submit now
explain insurance policy plain english	Low	60 days post-index	Not ranked — submit now
upload contract for review AI	Low	60 days post-index	Not ranked — submit now
insurance policy exclusions explained	Low–Medium	90 days	Not ranked
legal document plain english converter	Very Low	60 days	Not ranked
how to read an insurance policy	Medium	3–6 months	Not ranked — needs blog article
home insurance exclusions	Medium–High	6–12 months	Not ranked — needs blog article
KnowUrPolicy (brand)	None	1–7 days post-index	Will rank immediately on indexing

TODAY **Connect custom domain + Search Console**

Connect knowurpolicy.com to Vercel	5 mins	Vercel dashboard → Domains → Add custom domain. Do this before ANY indexing.
Submit to Google Search Console	10 mins	Verify via HTML meta tag in Next.js. Submit sitemap. Request indexing on /.
Submit to Bing Webmaster Tools	10 mins	Import from Google Search Console. Free 6-8% extra search traffic.
Fix og:locale to en_US	5 mins	Add to Next.js metadata. Signals US market to Google.
Add canonical tag to all pages	5 mins	One line in Next.js metadata per page. Prevents duplicate content.

THIS WEEK **Technical SEO + conversion fixes**

Fix Pro CTA — connect Stripe Checkout	High priority	Currently 'Coming soon' — kills every upgrade attempt
Build /privacy and /terms pages	Required for GDPR + Stripe	Footer links point to # right now — legally required pages
Add og:image 1200x630 branded card	30 mins design	Every LinkedIn share is a free impression — don't waste it
Add SoftwareApplication JSON-LD schema	15 mins	Rich snippet in Google results with star rating and pricing
Add FAQPage JSON-LD schema	15 mins	4 FAQ questions already written — add schema to unlock answer boxes
Install next-sitemap and generate sitemap.xml	20 mins	Auto-generates on every build. Submit URL to Search Console.
Set unique title + meta on /analyze page	5 mins	Avoid duplicate title penalty

NEXT 2 WEEKS **Brand + content**

Apply KnowUrPolicy design system	2–4 hours	Amber CTAs, Playfair Display headers, document logo mark, risk flag colours
Add product screenshot / mockup to hero	1 hour	Biggest single landing page conversion lift

Publish first blog post: AI insurance policy analyser tools 2026	2–3 hours writing	Targets Tier 1 keyword, self-referential, earns backlinks
Publish second blog post: Home insurance exclusions explained	2–3 hours writing	High-intent, natural product CTA at end
Add social proof placeholder	30 mins	'50 beta users' or 'Join 200 people who sign smarter' — even small numbers convert
Submit to Product Hunt, BetaList, Indie Hackers	1 hour	High-DA backlinks + initial user acquisition channel

Strong progress. The product now exists on the web.

The migration from GoDaddy to Vercel is the most important thing that happened — it unblocks everything. The landing page now has the right structure: strong H1, trust signals, sample output, pricing, FAQ, legal disclaimer. The PRD recommendations have been largely implemented at the content and structure level.

The critical gap is still the technical SEO layer. The site cannot rank until it is connected to the custom domain, submitted to Google Search Console, and has canonical + og:locale + schema tags in place. These are 30-60 minutes of work total. They are the difference between a site that ranks and one that does not exist to Google.

The conversion gap is the "Coming soon" Pro CTA. Every visitor who wants to upgrade hits a dead end. Connect Stripe today.

Target Milestones

Milestone	Action Required	ETA
Brand name 'KnowUrPolicy' ranking on Google	Connect domain → Search Console → Request indexing	1–7 days
First Tier 1 keyword in top 50	Submit sitemap + add schema + publish 1 blog post	30–45 days
First paying Pro user	Fix 'Coming soon' CTA → connect Stripe	This week
3 Tier 1 keywords on page 1	5 blog posts published + backlinks from Product Hunt	60–90 days
100 documents analysed	Launch on Product Hunt + social media	Month 1
20 paying Pro users	Pro CTA live + 1 pricing optimisation test	Month 2
Domain authority 10+	15 referring domains from content + directory listings	Month 3

Audit based on live crawl of knowurpolicy.vercel.app, May 2026. All scores are the auditor's assessment. Keyword difficulty is indicative. Rankings will vary based on ongoing SEO execution.
