SEO & Google Ranking Audit

knowurpolicy.com

12

/ 100
SEO HEALTH

Prepared by KnowUrPolicy AI Research | May 2026 | Confidential

**SEO Health Score: 12 / 100 — Critical**

knowurpolicy.com currently exists as a GoDaddy placeholder with virtually zero content, no Google indexing, and the locale explicitly set to en_IN (India) — the wrong market entirely. The domain has no organic search presence in the US or EU markets it intends to serve.

The good news: the consumer AI policy analysis keyword category is genuinely new. Competitors like policyadvisor.pro and mypolicyadvocate.com launched in late 2025 with low domain authority. The Tier 1 keywords have very low competition right now. A properly built site can rank within 60–90 days of launch.

Metric	Value	Status
Pages indexed on Google	0	CRITICAL
Backlinks / referring domains	0	CRITICAL
Ranking keywords	0	CRITICAL
Total pages on site	1	CRITICAL
Estimated domain authority	~1	CRITICAL
Geo locale configured	en_IN	WRONG MARKET
HTTPS / SSL active	Yes	PASS
Domain registered	Yes	PASS

Current Site Metadata

title	"Know Your Policy"	No AI, no insurance, no target keywords. Only 16 characters.
meta description	"Understand Your Insurance Better"	Vague, 35 chars. Google will auto-replace it.
og: locale	en_IN	Explicitly targets India. US/EU users deprioritised by Google.
generator	GoDaddy Website Builder 8.0	Known poor Core Web Vitals. No technical SEO control.
body content	~25 words total	One H1 and a Contact section. No value proposition.

structured data	None	No JSON-LD schema. No rich snippets possible.
SSL / HTTPS	Active	Secure connection confirmed.
robots.txt	Not blocked	Site is crawlable by search engines.

CRITICAL**Zero Google indexing — site is invisible**

A site:knowurpolicy.com search returns 0 results. Google has not indexed a single page. With a GoDaddy placeholder and no sitemap submitted to Google Search Console, the domain has no organic search presence.

Fix: Submit sitemap to Google Search Console immediately after rebuilding on Vercel. Request manual indexing for the homepage.

CRITICAL**GoDaddy Website Builder — catastrophic for SEO**

GoDaddy's builder is notorious for bloated JavaScript, poor Core Web Vitals (LCP, CLS, FID), and severely limited technical SEO control. Google has used page experience as a ranking signal since 2021. A slow, unoptimised GoDaddy page cannot compete with modern SaaS.

Fix: Migrate to Vercel + Next.js (already specified in the PRD). Target Lighthouse score >90. GoDaddy must go before any SEO work is meaningful.

CRITICAL**og:locale set to en_IN — targeting India, not US/EU**

The Open Graph locale is explicitly set to en_IN (English, India). This tells Google and social platforms the content is for an Indian audience. For a product targeting US and European users this is actively harmful to geo-targeted rankings.

Fix: Set og:locale to en_US. Add hreflang tags for en-US and en-GB. Configure Vercel edge for EU.

HIGH**Title tag fails on every keyword criterion**

"Know Your Policy" — 16 characters — contains none of the target keywords. No AI, no insurance, no plain English, no document. Google uses title tags as one of its strongest on-page relevance signals.

Fix: Use: "KnowUrPolicy — AI Insurance Policy Analyser | Plain English in 30 Seconds" (60 chars max)

HIGH**Meta description provides no differentiation**

"Understand Your Insurance Better" is a 36-character non-description. Google will override it with auto-generated content from the sparse page copy, killing click-through rate.

Fix: "Upload your insurance policy or contract and get a plain-English breakdown of what's covered, what's excluded, and what puts you at risk — in 30 seconds." (156 chars)

HIGH**No structured data (Schema markup)**

No JSON-LD schema of any type. Missing: SoftwareApplication (rich snippets for SaaS), FAQPage (answer boxes in search results), and HowTo schema (featured snippets). These are significant ranking multipliers that competitors are already using.

Fix: Add SoftwareApplication, FAQPage, and HowTo JSON-LD schemas on launch day.

MEDIUM**No sitemap.xml or robots.txt properly configured**

GoDaddy may auto-generate these but they are not optimised for a SaaS product. After migration, sitemap.xml must be submitted to both Google Search Console and Bing Webmaster Tools. Robots.txt should allow all crawlers on content pages.

Fix: Use next-sitemap library on Vercel. Submit to Search Console within 24 hours of launch.

MEDIUM**No branded Open Graph image for social sharing**

The og:image points to a Getty Images stock photo URL which may be inaccessible or unbranded. When someone shares the URL on LinkedIn or Twitter, the preview will look generic and untrustworthy — a major lost acquisition opportunity.

Fix: Create a branded 1200x630px OG image using the KnowUrPolicy design system. Host at /og-image.png.

None of the target keywords are currently ranked. The table below shows the priority keyword clusters, estimated competition, and recommended prioritisation. Tier 1 keywords are the immediate focus — low competition, AI-intent, commercial.

Keyword	Intent	Volume	Difficulty	Current Rank	Priority
AI insurance policy analyser	Commercial	Emerging	■■■■■■■■■■ Low	Not ranked	TIER 1
explain my insurance policy plain english	Commercial	Low–Med	■■■■■■■■■■ Low	Not ranked	TIER 1
insurance policy exclusions explained	Informational	Medium	■■■■■■■■■■ Med	Not ranked	TIER 1
upload contract for review AI	Transactional	Low–Med	■■■■■■■■■■ Low	Not ranked	TIER 1
legal document plain english converter	Commercial	Low	■■■■■■■■■■ Low	Not ranked	TIER 1
understand my insurance policy	Informational	High	■■■■■■■■■■ High	Not ranked	TIER 2
how to read an insurance policy	Informational	High	■■■■■■■■■■ Med	Not ranked	TIER 2
what is not covered by home insurance	Informational	High	■■■■■■■■■■ Med	Not ranked	TIER 2
renters insurance what is covered	Informational	High	■■■■■■■■■■ High	Not ranked	TIER 3
AI document simplification tool	Commercial	Low	■■■■■■■■■■ Low	Not ranked	TIER 1

Tier 1 keyword insight: AI-intent keywords ("AI insurance policy analyser", "upload contract AI") have very low competition right now. These terms are growing in search volume but no single site dominates them. KnowUrPolicy can own these within 90 days of launch with proper on-page optimisation and 4-5 targeted blog posts. The window is open — but it closes as more players enter the category in 2026.

My Policy Advocate mypolicyadvocate.com [Launched Nov 2025] [Consumer] [All 50 US states] [AI + Human hybrid]	Threat: HIGH Direct overlap — consumer-facing AI insurance policy analysis. Backed by licensed insurance professionals across all 50 states. Has proprietary 'Clara' AI assistant, subscription model, and PR coverage. Launched 6 months ago so domain authority is still building — KnowUrPolicy can compete on AI-intent keywords if it moves fast.
PolicyAdvisor.pro policyadvisor.pro [Direct competitor] [Free PDF upload] [Plain English output] [Privacy-first]	Threat: HIGH Nearly identical product — drag and drop PDF, get plain-English explanation, documents deleted after analysis. Currently ranks for 'insurance policy analyser' and related queries. KnowUrPolicy's differentiation must be the risk flag system, Q&A; mode, clause-level scoring, and a strong content SEO strategy.
insure.com / bankrate.com / nerdwallet.com insure.com, bankrate.com [DA 70-85] [Informational] [Comparison] [High authority]	Threat: MEDIUM These high-authority sites own broad informational keywords. KnowUrPolicy cannot out-rank them on pure informational queries in year one. However, it CAN rank above them for tool-intent queries (AI policy analyser, upload policy PDF) where they have no product to offer. Target the commercial intent gap, not the informational space.
Government / .gov sites (doi.sc.gov, mass.gov) state insurance departments [DA 60-80] [Informational] [Unbeatable authority]	Threat: LOW .gov sites dominate 'understand your insurance policy' educational queries but have NO product to offer — they're purely informational. Users landing on a .gov page still have the core problem unsolved. KnowUrPolicy should target the moment immediately after the .gov article visit with content that sits one search step deeper.

Competitive Gap Map

Competitor	Consumer Product	AI Analysis	Risk Flags	Document Q&A	Content SEO
My Policy Advocate	Yes	Yes (Clara AI)	No	Yes (text/voice)	Low DA
PolicyAdvisor.pro	Yes	Yes	No	No	Low DA
DoNotPay (defunct)	Yes	Basic	No	Limited	FTC issue
ChatGPT (ad hoc)	No product	Yes (generic)	No	Yes (generic)	Not applicable
KnowUrPolicy (target)	Yes	Yes (Claude)	YES — unique	Yes	Build now

Phase 1

Technical Foundation — Do Before Anything Else

Weeks 1–2

- ✓ Migrate off GoDaddy — deploy on Vercel with Next.js (already in PRD)
- ✓ Fix og:locale from en_IN to en_US. Add hreflang tags for en-US and en-GB
- ✓ Rewrite title tag: "KnowUrPolicy — AI Insurance Policy Analyser | Plain English in 30 Seconds"
- ✓ Rewrite meta description (156 chars, include key benefits and CTA)
- ✓ Set up Google Search Console and Bing Webmaster Tools. Submit sitemap.xml
- ✓ Request manual indexing on Google Search Console for the homepage
- ✓ Create branded 1200x630 Open Graph image, host at /og-image.png
- ✓ Add SoftwareApplication JSON-LD schema to homepage
- ✓ Verify Core Web Vitals — target Lighthouse score >90

Phase 2

On-Page Optimisation — Build Keyword Relevance

Weeks 3–5

- ✓ Homepage H1: "Understand Any Insurance Policy in Plain English" (primary keyword in H1)
- ✓ Homepage body copy: 400+ words naturally using target keywords (currently 0 words)
- ✓ Add FAQ section to homepage — 6 questions with FAQPage JSON-LD for Google answer boxes
- ✓ Create /blog directory. Publish first 2 seed articles (see content plan, page 7)
- ✓ Add HowTo JSON-LD schema to a 'how to read an insurance policy' article
- ✓ Build /how-it-works page — explains the product with semantic keyword density
- ✓ Optimise all images: WebP format, descriptive alt text, lazy loading
- ✓ Ensure mobile responsiveness — Google uses mobile-first indexing

- ✓ Publish 1 blog post per week targeting long-tail low-competition keywords
- ✓ Priority: 'Home insurance exclusions: the complete list', 'What renters insurance misses'
- ✓ Each article ends with a CTA to upload a document — convert informational traffic
- ✓ Submit to Product Hunt, BetaList, Indie Hackers, G2, Capterra for backlinks
- ✓ Outreach to personal finance and insurance blogs for guest posts and tool mentions
- ✓ Monitor Google Search Console weekly — track impressions, CTR, position
- ✓ Set up GA4 with conversion events: document upload, Pro upgrade, Q&A; usage
- ✓ Publish the "AI insurance policy analyser: best tools 2026" roundup — include KnowUrPolicy

These five articles form the foundation of KnowUrPolicy's content SEO strategy. Each targets a keyword cluster where competition is low, intent matches the product, and a natural conversion path exists (read article → upload your own document).

1 The 9 things your home insurance policy never covers (and what to do about it)

Target keyword: **home insurance**
exclusions

Difficulty: **Low**

Volume: High

Evergreen exclusion content. Users in research mode pre-claim. Natural product CTA: 'upload your own policy to see YOUR exclusions'. High shareability. Top informational intent.

2 How to read an insurance policy: a plain English guide for non-lawyers

Target keyword: **how to read**
insurance policy

Difficulty: **Medium**

Volume: High

Evergreen pillar article. Eligible for HowTo JSON-LD rich snippet. Positions KnowUrPolicy as the category authority. Target featured snippet with a numbered H2 structure.

3 What insurance companies don't tell you about your deductible

Target keyword: **insurance**
deductible explained

Difficulty: **Low**

Volume: High

Emotional hook with contrarian angle. Matches brand voice. Low competition. High share rate on personal finance communities and Reddit.

4 5 red flag clauses to look for before signing a freelance contract

Target keyword: **freelance**
contract clauses

Difficulty: **Very**
Low

Volume:
Medium

Targets v1.1 user segment (B2SMB freelancers). Zero AI tools currently ranking here. Highly shareable on LinkedIn and X. Converts directly to document upload.

5 AI insurance policy analyser: how they work and the best tools in 2026

Target keyword: **AI insurance**
policy analyser

Difficulty: **Very**
Low

Volume: Low

Tool-intent commercial keyword with very low competition. Self-referential roundup — KnowUrPolicy included as a top pick. Category-defining content. Earns backlinks from insurance blogs citing the roundup.

Verdict: 12/100 now — 65+/100 achievable within 90 days of launch.

The domain is a blank slate — which is both the problem and the opportunity. The bad news: zero Google presence, wrong geo-locale, GoDaddy placeholder — the site doesn't exist for US/EU search. The good news: the consumer AI policy analysis keyword category is genuinely new. policyadvisor.pro and mypolicyadvocate.com launched in 2025 with low domain authority. The Tier 1 keywords (AI insurance policy analyser, explain my insurance policy AI, upload contract AI) have very low competition right now.

A properly built Next.js site with 5 optimised blog posts, correct schema markup, and a Google Search Console submission can realistically rank on page 1 for Tier 1 keywords within 60–90 days of launch. The window exists. It closes as more tools enter in 2026.

SEO Success Milestones

Timeline	Milestone	Leading Indicator
Week 2	Site migrated, indexed on Google	Search Console shows homepage crawled
Week 4	Ranking for brand name 'KnowUrPolicy'	Position 1 for brand query
Week 6	First Tier 1 keyword in top 50	Search Console impressions > 0 for AI keywords
Day 60	3+ Tier 1 keywords in top 20	Organic clicks to homepage > 50/week
Day 90	2+ Tier 1 keywords on page 1	Organic signups from SEO > 20/month
Month 6	Domain authority 15–25	20+ referring domains from content links
Month 12	Ranking for 50+ long-tail keywords	Organic traffic > 500 unique visitors/month

Top 3 Quick Wins (Do This Week)

- Fix the locale**
Change og:locale from en_IN to en_US on GoDaddy settings right now — takes 2 minutes and immediately stops Google targeting the wrong geography.
- Register Google Search Console**
Add the domain at search.google.com/search-console. This is free, takes 10 minutes, and gives you visibility on indexing status immediately.

3

Save the title and meta description

Prepare your new title tag and meta description now (see page 3). These are ready to deploy the moment you go live on Vercel.

This audit was prepared based on a live crawl of knowurpolicy.com (May 2026), Google search result analysis for target keywords, and competitor research. Keyword difficulty and volume estimates are indicative. Actual rankings depend on content quality, backlink acquisition, and ongoing technical SEO execution.
