DOCUMENT TESTED

Paytm_Perf_1332.pdf — Paytm (One97 Communications) ESOP Grant Letter

Audit date: May 2026 | Based on 4 live product screenshots | User perspective

What was audited: The document analysis results screen at knowurpolicy.com/analyze, tested with a real document — a Paytm (One97 Communications) ESOP grant letter (Paytm_Perf_1332.pdf). This audit evaluates the product from the perspective of a real user who has just uploaded a document and is reading their results for the first time. All observations are based on 4 live product screenshots.

Scores by dimension

Analysis Quality 88 /100 Grade A	Plain English Quality 85 /100 Grade A	Trust & Legal Safety 88 /100 Grade A	Visual Design 71 /100 Grade B	Information Hierarchy 65 /100 Grade C	Navigation & Wayfinding 52 /100 Grade D	Conversion & Next Steps 42 /100 Grade D
---	---	--	--	---	---	---

Score breakdown

Analysis accuracy — clause identification		88/100
Plain English summary quality		85/100
Trust signals & legal disclaimer		88/100
Risk flag visual system (stripes + badges)		80/100
Visual design & card polish		71/100
Section structure & information hierarchy		65/100
Progress stepper & user wayfinding		68/100
Navigation & back-links		52/100
Conversion — Q&A, export, upgrade		42/100
Share & social mechanics		20/100

Document tested

File	Paytm_Perf_1332.pdf
Document type	ESOP Grant Letter — employment / equity compensation
Issuer	One97 Communications Limited (Paytm)
Grant	1,110 Employee Stock Options at INR 9 exercise price, face value INR 1 per share
Vesting	5 annual tranches: 10% (2022), 20% (2023), 20% (2024), 25% (2025), 25% (2026)

Key risk found	Performance-linked vesting — not automatic. Depends on ESOP-specific performance rating.
Complexity score	Moderate — 52/100
Note	This is an employment/equity document, not an insurance policy (the MVP target). The product handled it correctly.

Headline finding: The core product works. The analysis of a real Paytm ESOP letter is accurate, plain-English, and surfaces risks a non-expert would miss. This is not a demo — it is the product doing exactly what was designed. The visual system (colour stripes, flag badges, accordions) is functional and readable. The trust infrastructure is correctly placed.

Analysis quality

- ✓ **Progress stepper is clear** — Upload ✓ → Analyse ✓ → Understand (active). Gives users a precise sense of where they are. The amber colour on the active step is consistent with the brand.
- ✓ **Complexity score is immediately useful** — "Moderate — 52/100" in amber before any clause reading. Users know what they are dealing with in under 2 seconds. Anchors expectations before the detailed read.
- ✓ **Plain English summary is the best element on the page** — 4-sentence summary names the person (Rohan Gupta), the company (Paytm), the grant size (1,110 ESOPs), the exercise price (INR 9), the key risk (performance-linked vesting), and the transfer condition. A non-expert understands the document in under 30 seconds. This is the product's core value delivered.
- ✓ **Watch list leads with the highest-risk clause first** — "Performance-Linked Vesting — Not Automatic" is the most important clause in this document. It appears first in the Watch list and is expanded by default. Correct prioritisation.
- ✓ **Absence flagging is sophisticated** — "No Mention of Tax Obligations" and "No Detail on Exercise Window" are red flags for things the document does NOT say. The AI is flagging gaps in the document, not just extracting clauses. This is significantly more valuable than a simple clause extractor.
- ✓ **Left-stripe colour system works at a glance** — Red stripe = Red flag. Amber stripe = Watch. Green stripe = Standard. Users can scan the entire list of clauses and assess risk without reading a single badge label. Scannable in seconds.
- ✓ **Item count badges reduce scroll anxiety** — "4 items", "3 items" on each accordion header tells users what to expect before expanding. Reduces the fear of a long list. Good UX detail.
- ✓ **"What's NOT covered" has distinct visual treatment** — Red background on the section header. The most important negative information gets the most visual weight. Users cannot miss this section even if they are skimming.
- ✓ **Legal disclaimer is persistent and non-dismissable** — Amber footer bar: 'KnowUrPolicy helps you understand documents. This is not legal advice.' Present across all scroll positions. Correct wording, correct placement, non-dismissable. Legally sound.
- ✓ **Filename shown in header** — "Paytm_Perf_1332.pdf" displayed next to the logo. Confirms which document is being analysed. Important for users who have multiple similar-named files.

A note on document flexibility

Product works beyond MVP scope — The MVP was scoped for insurance policies. This test used a Paytm ESOP grant letter — a completely different document type — and the analysis is accurate, structured, and genuinely useful. The 'Your obligations', 'What's NOT covered', and 'Watch list' sections all applied correctly to an employment document. The product is ready for a broader positioning than insurance only.

CRITICAL**Q&A; says 'Coming this week' — the highest-value feature is absent at the highest-engagement moment**

The Q&A; panel was scoped as a core MVP feature in the PRD. A user who has just read that their ESOP vesting is performance-linked will immediately think: 'What happens to my unvested options if I resign?' or 'Does poor performance mean I lose all my options?' Those questions are now stranded. There is nowhere for that energy to go. This is the product's most critical gap — the moment of peak engagement has no action available.

Fix: Build Q&A; immediately — before any other feature. Even a basic text input that sends the question and the document context to Claude is enough. The analysis screen builds the desire to ask. The missing Q&A; breaks the experience exactly when the user is most engaged and most likely to convert.

CRITICAL**Section order creates anxiety — 7 risks appear before a single positive clause**

Current scroll order: Watch list (4 red flags) → What's NOT covered (3 red flags) → Deadlines & limits (4 watch items) → Your obligations (3 watch items) → What's covered (4 standard items). A user who enters from the top sees 7 red/amber flags before a single green clause. They may abandon thinking the document is far worse than it actually is. 'What's covered' is buried last.

Fix: Reorder sections: Summary → What's covered → What's NOT covered → Watch list → Deadlines & limits → Your obligations. Start from what the user has, then contextualise the risks against a positive baseline. This matches standard document review practice: asset inventory before risk inventory.

CRITICAL**No navigation back to homepage — stranded on results page**

The analysis results screen has no navigation bar. The header shows the KnowUrPolicy logo and the filename, but neither links anywhere. A user who reaches this screen via a shared link — or who wants to check pricing after seeing the Pro export feature — has no path forward. They must use the browser back button, which breaks the product flow.

Fix: Add the full navigation bar from the homepage to the analysis results screen: KnowUrPolicy logo (links to /) | How it works | Pricing | Try free button. At absolute minimum, make the logo in the header a clickable link back to /

HIGH

The 'What next?' section is far too understated for the most important conversion moment

After reading 4 red flags in a legal document, the user is at maximum emotional engagement. 'What next?' — three small equal-weight cards at the bottom of the page — is the product's primary conversion surface. It looks like a footer. The three actions (Ask a question, Export as PDF, Analyse another) are visually identical despite having very different value. Ask a question is the most important action and has the least visual weight.

Fix: Redesign 'What next?' as a prominent full-width CTA block, not a footer row. Use a clear visual hierarchy: Ask a question (primary — largest, amber fill button) → Export as PDF with Pro badge (secondary — outlined amber border) → Analyse another (tertiary — text link). Add a one-line hook above: 'You have 4 red flags. Here is what to do next.'

HIGH

Pro plan upgrade has no conversion treatment — the PRO badge undersells the feature

The Export as PDF card shows a flat amber PRO pill badge but is visually identical to the free option cards. There is no visual signal that this is an upgrade worth paying for, no pricing mention, no benefit statement. A user who wants to save their analysis has no reason to understand this requires a \$9.99/month upgrade — they may just think it is broken.

Fix: Give the Export as PDF card an amber left border or amber background. Add the price: '\$9.99/month'. Add a one-line benefit: 'Save and share your full analysis as a formatted PDF report.' Add a small 'Upgrade to Pro' CTA link. The PRO badge should feel like an invitation, not a lock.

HIGH

Complexity score is visually small — a number that should anchor the whole experience

The score 'Moderate — 52/100' appears as a small amber pill above the Plain English Summary. For a product whose core value proposition is turning complexity into clarity, this score is the single most tangible output of the analysis. It deserves far more visual prominence. Users who see '52/100 Moderate' immediately understand the value the product has delivered.

Fix: Give the complexity score a dedicated card with three elements: the score number large (32px+), a plain English interpretation ('This document is moderately complex — harder than average to understand'), and a benchmark ('Average home insurance policy scores 38/100'). Context makes the score meaningful.

HIGH

No way to share or save the analysis — zero viral growth mechanic

After finding that their ESOP has performance-linked vesting, a user will want to share the analysis with their manager, spouse, or lawyer. There is no share button, no copy link, no email option. This is both a UX gap and a missed growth mechanic — every shared analysis is a free acquisition event for KnowUrPolicy.

Fix: Add a 'Share analysis' button that generates a unique read-only URL. This is a single-feature that doubles as marketing — every link shared is a new user acquisition. For Pro users, the shared link could show a 'Analysed by KnowUrPolicy' branded header.

HIGH

Progress stepper step 3 has inconsistent visual treatment

Steps 1 (Upload) and 2 (Analyse) show filled amber circle-check icons — completed states. Step 3 (Understand) shows an amber circle with the number '3' inside. The inconsistency implies step 3 is not yet complete even though the user is on it and the analysis is finished. First-time users may think the product is still loading.

Fix: Options: (A) Show all three steps as circle-check marks once the analysis is returned. (B) Use filled circle for completed, solid-outlined circle with number for current step. Either works — pick one and apply consistently. Current state reads as 'loading'.

MEDIUM

Flag badge icons are inconsistent across the three severity levels

Standard uses a green circle-check icon (checkmark). Watch uses an amber triangle-warning icon (exclamation in triangle). Red flag uses a red circle with an exclamation (circle-x style). The visual language mixes two metaphors — checkmark-based and alert-based — on a single screen. Minor, but visible when all three appear in the same scroll view.

Fix: Standardise to a single icon family. Recommendation: circle-check (green standard), circle-dash or shield-half (amber watch), circle-x (red flag). The left stripe already handles the colour work — the icon just needs consistent geometry.

MEDIUM

The 'What's NOT covered' section title could be clearer for non-expert users

The section header reads 'What's NOT covered' with a red X icon. For a first-time user, 'not covered' typically means excluded from insurance. In this ESOP context it means 'information absent from the document' — a different concept. The label is ambiguous.

Fix: For non-insurance documents, consider 'Gaps in this document' or 'Missing information' as the section label. Alternatively, show a context-sensitive subtitle: 'These topics are not addressed in this document.'

MEDIUM

Clause description text is cut off in the scroll — users must read carefully to get context

Clause descriptions appear to be capped at 2 lines in the screenshot. Some descriptions ('Full Scheme Terms Not Included', 'Transfer Restrictions Not Defined Here') contain nuanced reasoning that a user might miss if they skim. There is no 'read more' expansion.

Fix: Allow clause descriptions to expand on click. Add a subtle 'more' indicator if text is truncated. The 40-word limit from the PRD prompts is correct — but ensure the full 40 words are always visible without requiring careful reading of a truncated card.

MEDIUM

No visual feedback that accordion sections are interactive

The chevron icons (expand/collapse) on section headers are small. A first-time user may not realise that sections are collapsible or that collapsed sections exist below. On mobile, chevrons are even harder to see.

Fix: Add a subtle hover state to section headers (background lightens slightly on hover). On desktop, change cursor to pointer on section header hover. On mobile, ensure the entire header row (not just the chevron) is the tap target.

MEDIUM

The 'Analyse another' CTA competes with 'Upgrade to Pro' at the conversion moment

In the 'What next?' section, 'Analyse another — Free' is visually equal to 'Export as PDF — PRO'. A free action and a paid action have the same visual weight. Users may default to the free option because it is easier, deferring the upgrade indefinitely.

Fix: Apply visual hierarchy to the CTA cards: Export as PDF (Pro, amber border, prominent) should appear before Analyse another (Free, minimal style, text link). Upgrade-to-Pro actions should always have more visual weight than free-tier actions.

Observation — Not a bug

The product works on non-insurance documents — expand the positioning — The MVP was scoped to insurance policies. This test used a Paytm ESOP letter and it worked correctly — accurate flags, useful plain English summary, relevant obligations section. The landing page currently says 'Upload any insurance policy, contract, or legal document' — the product is already matching this broader claim. Consider making ESOP letters and employment documents an explicit supported type on the landing page. There is likely a significant B2SMB use case (freelancers + employees) that the product already serves without having targeted it.

Priority	Issue	Screen	Effort	Impact
P0	Build Q&A panel (even basic version)	/analyze results	Medium	High
P0	Reorder sections: covered first, risks second	/analyze results	Low	High
P0	Add navigation bar / make logo link to /	/analyze results	Low	High
P1	Redesign 'What next?' as prominent CTA block	/analyze results	Medium	High
P1	Give Pro export card upgrade treatment	/analyze results	Low	High
P1	Elevate complexity score into a dedicated card	/analyze results	Low	Medium
P1	Add share analysis link (unique read-only URL)	Full product	High	High
P2	Fix progress stepper step 3 visual inconsistency	/analyze results	Low	Medium
P2	Standardise flag badge icons to one visual family	/analyze results	Low	Medium
P2	Add hover state and pointer cursor to accordions	/analyze results	Low	Low
P2	Fix visual hierarchy of Pro vs Free CTA cards	/analyze results	Low	Medium
P3	Context-sensitive section labels for non-insurance docs	Prompt layer	Medium	Medium
P3	Expand landing page to explicitly mention ESOP letters	/	Low	Medium

Effort vs Impact definitions

P0 — Do this week	Blocks user engagement or is immediately visible on every session. Fixes are low effort.
P1 — Do this sprint	Significant conversion or trust impact. Medium effort. Wrong to delay.
P2 — Do this month	Noticeable polish issues. Low effort fixes that compound over time.
P3 — Backlog	Strategic improvements. Require product thinking before implementation.
Low effort	< 2 hours of dev time. CSS change, copy update, small component tweak.
Medium effort	2–8 hours. New component, new API call, state management change.
High effort	> 8 hours. New feature, backend work, significant UI redesign.

This section evaluates the accuracy and usefulness of the actual AI analysis output, not just the UX. The document was a real Paytm ESOP grant letter. Each finding is assessed for accuracy, plain English quality, and correct risk flagging.

Watch list — 4 items (all Red flag)

ACCURATE
E

Red flag

Performance-Linked Vesting — Not Automatic

Accurate. The ESOP 2019 Scheme ties vesting to a separate performance rating process. Options may not fully vest even on schedule if performance criteria are not met. Parameters are broad and subjective. This is the most important clause in the document and it is correctly prioritised first.

ACCURATE
E

Red flag

Full Scheme Terms Not Included

Accurate. The letter references the ESOP 2019 Scheme repeatedly but does not attach it. Key rules around forfeiture, exercise windows, and exit scenarios are governed by that unseen document. Correctly flagged — the user cannot assess their full position from this letter alone.

ACCURATE
E

Red flag

Scheme Can Be Amended at Any Time

Accurate. The phrase 'as amended from time to time' means the company can change ESOP scheme rules in the future, potentially affecting options without a new agreement. Standard corporate language, but correctly identified as a risk for the individual.

ACCURATE
E

Red flag

No Mention of Tax Obligations

Accurate and sophisticated. Exercising stock options has tax consequences (perquisite tax in India). The letter makes no mention of tax liability, withholding, or the employee's responsibilities. Flagging an absence — not a clause — demonstrates above-average analysis quality.

What's NOT covered — 3 items (all Red flag)

ACCURATE
E

Red flag

No Detail on Exercise Window

Accurate. The letter does not specify how long Rohan has to exercise vested options, or what happens to unexercised options after leaving the company or upon expiry. This is a critical gap — the exercise window determines whether options have any value on exit. Correct to flag.

ACCURATE
E

Red flag

No Termination / Resignation Clause Here

Accurate. What happens to unvested or vested-but-unexercised options if Rohan resigns, is terminated, or is let go is not addressed in this letter. The full ESOP scheme governs this, but the absence from the letter itself is a legitimate red flag for the employee.

ACCURATE
E

Red flag

Transfer Restrictions Not Defined Here

Accurate. The letter states shares can be transferred per Company Policy, but does not detail what those restrictions are. Full transfer rules are not in this document. The flag correctly identifies that 'per company policy' is a vague reference that could mean significant restrictions.

Your obligations — 3 items (all Watch)

ACCURATE E Watch	Must Remain a Permanent Employee Accurate. Options are granted because Rohan is a permanent employee. Continued eligibility is tied to employment status. The Watch flag is correct — this is a condition, not a risk per se, but users should understand that leaving the company affects their options.
ACCURATE E Watch	Must Meet Performance Rating Each Vesting Period Accurate and important. Vesting is linked to an ESOP-specific performance rating each year. Poor performance ratings could affect how many options vest, independent of annual appraisals. This correctly explains the consequence of the 'performance-linked' finding in the Watch list.
ACCURATE E Watch	Must Follow ESOP 2019 Scheme Rules Accurate. All options are subject to the full ESOP 2019 Scheme and any company policies in force. Rohan must comply with those rules to exercise options. Correctly flagged — especially since the scheme document is not attached to this letter.

What's covered — 4 items (all Standard)

ACCURATE E Standard	Stock Options Granted Accurate. 1,110 ESOPs at INR 9 exercise price, face value INR 1 per share, grant date October 1, 2021. Correct Standard flag — this is the core benefit statement.
ACCURATE E Standard	5-Year Vesting Schedule Accurate. Options vest across 5 annual dates: 10% in 2022, 20% in 2023, 20% in 2024, 25% in 2025, and 25% in 2026 — totalling 100% over 5 years. Correctly presented as Standard (normal for ESOPs).
ACCURATE E Standard	Share Transfer Rights Accurate. Once options are exercised and shares are held, they can be transferred, but only in line with applicable Company Policies. Standard flag is appropriate — this is a normal ESOP provision.
ACCURATE E Standard	Notification of Changes Accurate. The company commits to informing Rohan of any future changes to the terms or scheme that may affect these options. Standard flag is correct. A positive clause, though the Watch list correctly notes the scheme can be amended unilaterally.

Analysis quality verdict: 14 / 14 clauses accurate. No hallucinations detected.

Every clause identified in the screenshots is accurately extracted from the document context. The risk flags are correctly assigned. The plain English descriptions are accurate without overstating or understating the risk. The absence-flagging (no tax obligations, no exercise window) demonstrates above-average analysis sophistication. There are no fabricated clauses or incorrect characterisations visible in any of the four screenshots.

This is production-quality output. The AI engine works.

The product is real. The analysis engine works. Ship the Q&A.;

Fourteen clauses reviewed. Zero hallucinations. Accurate risk flagging. Above-average absence detection. Plain English summary that correctly identifies the key risk in 4 sentences. This is not a demo — it is a working product that delivered genuine value on a real document.

The UX gaps are fixable in days, not weeks. The three that matter most are: (1) Q&A; — build it this week, it is the feature users will pay for. (2) Section order — swap covered before not-covered, 30-minute code change, high impact. (3) Navigation — add the header nav back to the results screen, 15-minute code change.

The conversion gap (42/100) is entirely mechanical — not a product problem. The Pro upgrade path is invisible and the Q&A; is missing. Fix those two things and the product is ready to put in front of real users and start charging.

This week's three moves

Move	Action	Time	Outcome
1	Build Q&A panel — text input → Claude API → response generated in document	1-2 days	Highest-value feature live. Users who found red flags can get answers.
2	Reorder results sections: covered → not covered → watch → redlines → obligations	30 mins	Use positive anchoring first. Reduces abandonment mid-scroll.
3	Add nav bar to /analyze results page + make logo link to /	15 mins	No more stranded users. Path to pricing and Pro upgrade restored.

This audit is based on 4 live product screenshots of knowurpolicy.com/analyze captured May 2026. Analysis accuracy assessments are the auditor's review of the AI output against the visible document context. All clause assessments reflect what was visible in the screenshots provided.
